H1'18/19 Results Review

Jumbo released its H1'18/19 results, with profitability standing above Afe.

In more detail: Jumbo posted H1'18/19 EBITDA of €140.4m, up 7.5% y-o-y (5% above Afe), mirroring top-line growth, while net profit reached €98.7m, up 9.2% y-o-y (7% above our call). Gross margin managed to rise by c50bps y-o-y to 50.8%, despite the strengthening of the USD against the EUR (EUR/USD rate stood at 1.15 on average in H1'18/19, vs. 1.18 a year ago), while EBITDA margin eased by c10bps. Recall that Jumbo had pre-announced the sales figure, which came in 7.6% higher y-o-y at €476.7m (Greece incl. exports and online +2.9%, Cyprus +c2%, Bulgaria +c9% and Romania >30%).

Net cash position came in strong at €392m (from €287m in FY'18/19 and vs. our FY'19/20e projection of €342m) on the back of solid FCF generation (€135m). Hence, the company's management decided to distribute an **interim dividend** of €0.19/share (1.3% yield, ex-date on May 8).

Moreover, Jumbo announced that sales in the first 8 months of the fiscal year (July-February) rose by 7% y-o-y, in line with our full year estimates. Note that the 8-month top-line growth was exhibited despite the fact that Carnival celebrations took place later this year.

Our View: Jumbo reported strong H1'18/19 results with Greek operations presenting resilient performance, despite the adverse macro environment domestically that has led to low consumption levels. At the same time, the company's international expansion plan is well on track with main focus in Romania, supporting growth. Note that Jumbo opened two new stores in Romania in H1'18/19 and plans to open one more store in Romania by the end of the month and one more at Northern Greece by the end of the fiscal year. We remain positive on the stock, based on a) the company's growth outlook stemming from its increasing international exposure and b) its solid fundamentals that lead to considerable net cash position.

P&L (€m)	H1'17/18a	H1'18/19a	H1'18/19e	Δ. vs. Afe

Source: Alpha Finance | Data as of 31.12.18 | 1: Total Return Potential (=capital return + dividend yield) | 2: except otherwise stated | 3: Percentage of companies under coverage within this category as of 31.12.18 | 4: Percentage of companies within this rating category for which investment banking services were provided over the past 12 months, as of 31.12.18. In several occasions, subject to the analyst's view and/or due to volatility of the shares, the ratings applied may fall out of the brackets described in the table above.

The Alpha Finance universe consists of 50 companies accounting as of 31.12.18 for 84.9% of total market value

Risk ratings explained

We derive the overall risk rating for a stock by applying a 60% weight on quantitative and a 40% weight on qualitative factors. We use a scale from 1 to 3 to describe 'low', 'medium' and 'high' risk respectively. We compute two different quantitative risks namely liquidity and volatility. We assign equal weights to liquidity and volatility risks to arrive at a so-called trading or quantitative risk for the specific stock researched. Using a scale of 1-to-3 scale, each analyst also assigns a qualitative risk that is entirely up to his/her discretion to determine. Following this, we calculated the combined risk of the specific stock applying the weights mentioned earlier. All IPOs are classified 'high risk' for 12 months after their listing date.

Definitions of Risk Ratings

Quant factor	Definition	Brackets	Risk rating
Liquidity	Number of shares traded over the last 12 months as % of total shares outstanding	If less than or equal to 33% If greater than 33% but less than or equal to 66% If greater than 66%	High Medium Low
Volatility	The standard deviation of daily changes during the last 12 months. Volatility is used as a statistical measure of dispersion and indicates the propensity of a specific equity to suffer large swings in price. The stock's volatility is measured against the volatility of the ASE index	If equity volatility against the market's is greater than 2 If equity volatility against the market's is greater than 1.5 but less than or equal to 2 If equity volatility against the market's is less than or equal to 1.5	High Medium Low
